

Summary

This is a summary of my job search as I launch myself into my new Information Systems career. I am convinced that at this juncture in my professional career that I can land a Project Management position.

I am really excited to put in place all I've learned this far from all my courses including this one. I am well aware that newer techniques in Project Management involve some type of programming so at so depending on my job specification I may be required to code. So this class is a very important one.

Persona

Job Seeker - Candace Grant; a high school teacher with over six (6) years of experience in teaching and tutoring. She has had tech experience working as a Computer teacher. After years of inspiring others to follow their dreams she believes that its time to follow her true passion and dive into a highly analytical career path. The Information Systems Bachelor's degree program is exactly on point with her dream hence her enrollment in the program.

Problem Scenario

- Job Seekers lack of Experience in the Project Management and other related careers such as Systems Analyst and Programming
- Job Seekers resume and cover letter need to be more convincing to potential recruiters.
- Job Seeker needs an internship to get 'into the door' so to speak.

User Case Stories

- Resumes have been sent and few responses about one in twenty have come back favorable.
- Favorable responses have led to phone interviews and that has been the last step in the interview process so far.
